RE: Phase II Environmental Site Assessment (ESA)
603 Somers Rd, Somers, MT 59457

Dear Mr. Birk,

Big Sky Civil & Environmental, Inc. (BSCE) hereby submits this abbreviated report which summarizes Phase II investigative activities and analytical findings as completed for the subject property. The activities were performed to determine if certain chemicals of potential concern (COPCs) exist in surface soils, subsurface soils, or in groundwater at the subject site. In the following paragraphs, we describe the areas of assessment, sampling procedures, laboratory analyses completed, and analytical results.

On October 31, 2024, eight (8) test pits were completed at the subject site; the estimated locations are depicted on **Fig. 1**. The first four test pits, TP-01 through TP-04, were excavated to approximately 36" beneath ground surface (bgs). From these test pits, soil samples were collected from 0-6 inches bgs and from 30-36 inches bgs. The last four test pits, TP-05 through TP-08 were excavated to the observed groundwater table, which was encountered at a depth of approximately five feet (5') bgs. From these test pits, groundwater samples were collected.

Soils from the test pits were field-screened using BSCE's photoionization detector (PID). No levels of volatile organic compounds (VOC's) were detected and none of the soils contained olfactory or visual signs of contamination (including but not limited to staining or odors).

The soil and groundwater samples described above were submitted to Energy Laboratories, Inc. in Helena, MT and analyzed for the following:

- Volatile Organic Compounds (VOCs) via EPA Method 8260
- Semi-volatile Organic Compounds (SVOCs) via EPA Method 8270, including:
 - o Phenols
 - o Polycyclic Aromatic Hydrocarbons (PAHs) – Low Level by SIM

Quality Assurance/Quality Control

All sampling was completed in strict accordance with BSCE's standard QA/QC procedures. The following procedures were used during sample collection to provide quality assurance

and quality control (QA/QC), to minimize loss of volatiles, and to maintain the suitability of samples for analysis. Sample collection and analytical procedures were consistent with SW-846: *Test Methods for Evaluating Solid Waste*, November 1986, and updates published by the U.S. EPA. QA/QC methods include but are not limited to:

- All sample containers/preservatives were supplied by a state-certified laboratory. Analyses were performed by a state-certified laboratory.
- All samples were handled in a manner which minimizes the loss of organic compounds to volatilization and biodegradation.
- All samples for analyses were placed in a cooler on ice (at a temperature of 4° C) immediately following collection.
- Chain-of-custody procedures were utilized during sampling and delivery.

Results & Discussion

The attached report as received from the laboratory (H24110085) contains analytical findings for the samples described above; refer to **Table 1** and **Table 2** for results and applicable regulatory limits in tabular format.

Upon review of the results, the groundwater samples contained a detectable concentration of one analyte: methylene chloride, which can be found in agriculturally related pesticide products. Results were as follows: 1.4 ug/L, 1.2 ug/L, 1.3 ug/L, and 1.6 ug/L at TP-05, TP-06, TP-07, and TP-08, respectively. For methylene chloride (AKA dichloromethane), the Montana Department of Environmental Quality (DEQ) numeric water quality standard is 5.0 ug/L; the United States Environmental Protection Agency (US EPA) maximum contaminant limit (MCL) is also 5.0 ug/L, meaning no exceedances of regulatory limits were encountered for the samples. No other detectable concentrations of analytes were reported by the laboratory for the remaining groundwater or soil samples.

Conclusions & Recommendations

No signs of contamination (e.g., staining/odors) were noted during fieldwork (excavation of the test pits). No exceedances of regulatory limits were encountered in soil and groundwater samples collected and analyzed by the laboratory. Therefore, no additional investigation or additional services are recommended.

While it is not considered practicable to test soils and groundwater at every location throughout the subject property, the environmental professional can confidently state that elevated levels of chemicals of potential concern (COPCs) were not encountered at the test pit locations and that widespread contamination of the property does not appear to exist.

Limitations

The scope of work for Phase II investigative services was limited to completion of test holes, collection of samples, analytical testing, data interpretation, and report development. The intent

NOV 25 2024

of this work was to evaluate potential environmental liabilities associated with former uses of the property and surrounding properties. Information and findings presented in this report are based on conditions observed, given the level of effort authorized, and based on information provided by others. This report does not constitute a guaranty, warranty, or positive assertion as to the presence or absence of site contamination. In addition, the Phase II investigative work was conducted in accordance with the limited scope of work outlined, was conducted in accordance with the accepted industry standards, and did not include an evaluation of all environmental regulations as they may apply to the property. Only those issues presented herein were assessed during the study.

Please do not hesitate to give us a call if you have questions or concerns regarding the findings presented herein.

Respectfully,
Big Sky Civil & Environmental, Inc.

Joseph N. Murphy, P.E.

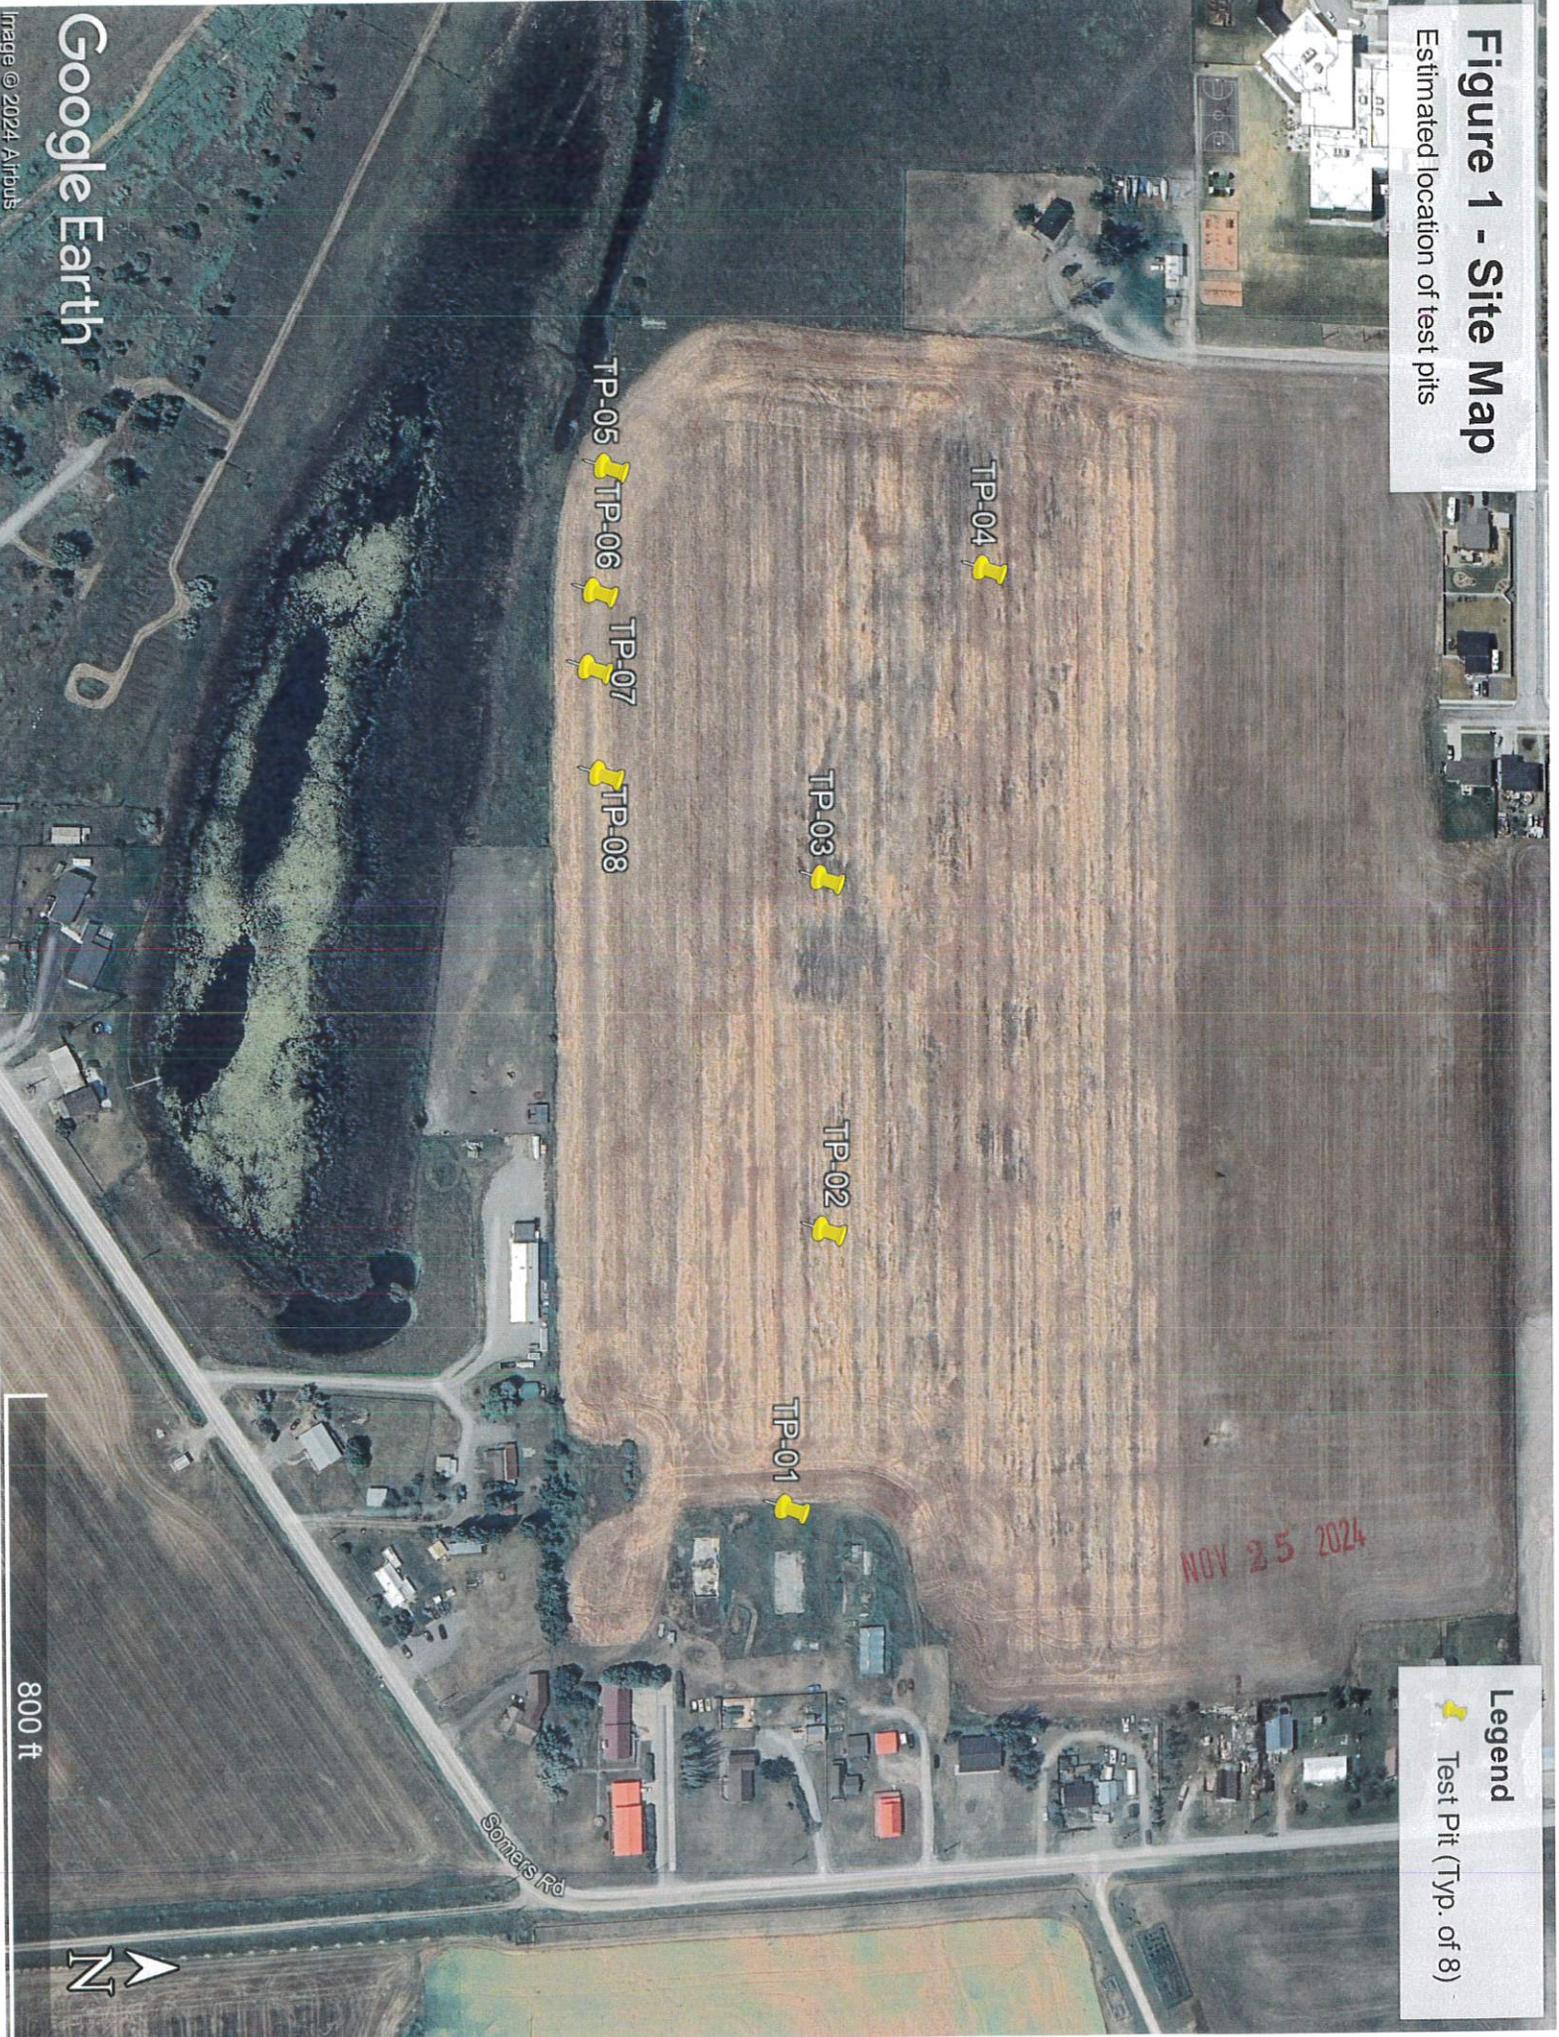

Paxton Ellis, P.E.

NOV 25 2024

CLIENT: Big Sky Civil and Environmental
Project: 24AE-Tim Birk Somers Ph 11 ESA
Work Order: H24110085

Report Date: 11/18/24

CASE NARRATIVE

Tests associated with analyst identified as ELI-B were subcontracted to Energy Laboratories, 1120 S. 27th St., Billings, MT, EPA Number MT00005.

Water - pH acceptable upon receipt?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input checked="" type="checkbox"/>

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as -dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.
