

# FLATHEAD COUNTY ADULT DETENTION FACILITY ANALYSIS

July 17, 2018

Whitney Aschenwald Flathead County Commissioners' Office 800 South Main Street, Room 302 Kalispell, MT 5990 I

VIA: US Mail

Re: Flathead County-Adult Detention Facility Analysis – Final Report

Dear: Aschenwald, Board & Selection Committee Members:

Spectrum Group Architects, in association with LCA Architects (Spectrum / LCA), are pleased to provide Flathead County this report of the committee's analysis of the Flathead County-Adult Detention Facility.

This report is a summation of the work effort that has gone into identifying the counties current and future space needs for an Adult Detention Facility, Sheriff's Office and Court systems.

The next stage is for the County to identify available funding sources and to develop a revenue budget to support and construction and operation of the new facilities.

Sincerely, Spectrum Group Architects, P.C.

Preliminary Findings-March 29, 2018 Public Presentation

#### PROJECT UNDERSTANDING

In January of 2018, the Flathead County Commissioners contracted with Spectrum Group Architects (Spectrum) and LCA Architects (LCA) to plan for a new 260 bed adult detention facility and study the feasibility of expanding courts into the existing jail space in the Justice Center. At a minimum, the County wants to determine if the existing Justice Center site will support the long term needs of the jail and courts combined or if a new site will be required to support these two parts to the Justice System.

#### The general scope of this study included:

- Facilities and site programming including formulating facilities and site requirements necessary to support expected activities, services, staffing, and jail beds.
- Identify space requirements for expanding Courts.
- Identify space requirements for the county Jail.
- Classify the different types of housing units.
- Develop conceptual building and site layout for the proposed facilities.
- Estimate costs of the proposed facility.

Studies such as these invariably involve dealing with real-world constraints in terms of the recommendations that are developed, as well as the logistics of conducting the study.

Of primary importance is recognizing the financial constraints that are forecasted through the planning horizon of this study. These limited resources may prevent the optimum, or even second-best solution from being part of the actual implementation plan. In other cases, public opinion or politics may preclude a key part of a proposed master plan from being included. It is therefore advisable to involve appropriate public committees and/or representatives in the process as part of the County/City effort to campaign for the plan.

The early discovery and resolution of key issues that arose during the project was critical to its success and timely completion. Therefore, before beginning this project in earnest, we conducted a Project Initiation Phase, part of which included meeting with key personnel and other management level staff to understand the known issues and potential pit falls associated with this project.

# introduction

To assure the early discovery of key issues and, perhaps as critical, develop a decision-making mechanism to resolve them, as part of the project initiation phase we formulated a transition team that included the County Manager, Sheriff and key designated county representatives and project managers from the consultant team. This team was called upon when key issues were discovered which required immediate attention.

We utilized a highly interactive approach in solving the County's needs. We held several project review meetings at key junctures or when critical findings were discovered during the project, and near the conclusion of each project phase. Punctuating the project with these review meetings assured that everyone was on the same page, regarding our findings, and planning assumptions. This minimized the need for rework and maintained the collective project team's enthusiasm regarding this study through providing tangible deliverables at an early date.

Planning sessions for the project occurred on the following dates:

- January 15, 2018
- March 1, 2018
- March 29, 2018
- April 24, 2018
- June 14, 2018

Spectrum and LCA conducted a presentation of the draft report, to an audience of County elected officials, invited press and public, on March 29, 2018.

## Data Acquisition and Fact Finding:

- Review the documents and reports such as budgets, organizational charts, annual service plans and workload reports to fully understand the information obtained.
- Conduct interviews with the selected department staff.
- Conduct on-site evaluations of Courts and Jail operations.
- We quantified the department's existing facilities and sites in terms of space
  utilization, functionality, physical condition, and life span. To achieve this goal, we
  collected and analyzed building and site plans, related real-estate data, and
  maintenance records. We also conducted interviews with department staff,
  maintenance staff, and toured all facilities. Site acreage, parking capacity (visitors,

# introduction

staff, and city/county vehicles), and building expansion potential was also documented.

• We conducted a workshop with county staff to present our findings, obtain comment, and refine the findings as appropriate.

#### **Facilities and Site Programming:**

- We conducted extensive interviews to secure necessary space programming information relative to specific area requirements for all existing and proposed personnel and special facilities required.
- We provided a description of the proposed construction solution (size, levels, etc.), the general exterior and interior planning considerations including technical requirements such as lighting, HVAC, Communication needs, Data Processing requirements, a descriptive listing of all assignable areas including function, space relationships, environmental needs and a preliminary list of furniture and equipment needs.
- We conducted a workshop with county staff to present our findings, obtain comment, and refine the program as appropriate.

## Conceptual Planning:

- We provided a conceptual floor plan for the proposed facilities that addressed the recommendations listed in the programming phase.
- We prepared a project cost estimate for all planned facilities.
- We conducted a workshop with county staff to present our findings, obtain comment, and refine the plans as appropriate.

## Facilities Implementation/Development Plan:

- We compared the resulting requirements to existing conditions and developed several alternate planning solutions for evaluation and ultimately, selection of a specific facilities development and implementation plan.
- We prepared a final report that addressed all the issues above.
- We then prepared and presented this information to the Advisory Committee and to the County Commissioners.

#### PROGRAMMING AND PLANNING PROCESS

#### **GOALS**

The foremost programming goal was to develop the program for a new 260 bed jail facility that would serve the needs of Flathead County for the next 20 years. The County directed the consultant team to develop a building program and concept plan with the intent of reducing design and construction costs. In addition to the benefits of lower costs, implementing this concept should provide Flathead County with the advantages of consistent operations, organizational structure, staffing, and procedures.

The building space program developed has been formulated to provide a facility with the capacity to meet the 20-year needs of Flathead County. Therefore, some growth space will be available, upon initial occupancy.

#### **PROCESS**

The Project Team used the following methodology to develop the space program documented herein.

- Consistent industry-accepted space planning standards were utilized for all workstations, equipment and special-use areas.
- The resulting square footage was then multiplied by several factors to account for circulation space and code required elements:

The program documented herein is the result of the collective efforts of the Consultant and Flathead County and this program has not been influenced by any specific site or other potential constraints and is a statement of actual and future needs.

#### SPACE PLANNING STANDARDS

The space planning standards used here are intended to provide the following benefits to Flathead County:

- provide work space allocation standards consistent with County-policy;
- provide functional and efficient work space commensurate with the tasks being performed;
- provide appropriate levels of privacy or communal-type environments as needed;
- minimize hard-wall construction, which will yield:

- maximum rearrangement flexibility;
- minimize construction costs;
- mitigate building maintenance and operations costs by creating minimal fire, lighting, and HVAC zones.

In concert with the space allocation guidelines used, private office allocations should be limited to management-level personnel, or personnel whose tasks require demonstrated privacy and/or confidentiality. These positions include: captains, lieutenants, administrators, and selected sergeant's positions. Wherever possible, all other staff requiring workstation space should be provided with systems furniture-type accommodations, except where conventional free-standing furnishings where either desired by the County or recommended by the Consultant Team. Workstations which accommodate personnel for multiple shifts should have private lockable storage and files for each user.

#### PARKING REQUIREMENTS

#### **METHODOLOGY**

The following criteria were taken into consideration by the programming team in developing the anticipated parking requirements for the new facilities.

Subdivide Parking Areas by Use:

- The parking areas should be physically divided into a minimum of two specific areas:
  - Public and other department visitors
  - County vehicles and staff vehicles.
- Ideally, the County vehicles would be separated from those of staff. Visitor parking should be provided on grade if possible and provide direct access to the public lobby of facility. The parking areas(s) for staff and County vehicles should be both physically and visually secure, for two primary reasons:
  - To provide anonymity for jail and Sheriff's Office staff
  - To prevent vandalism which has occurred in the past.
- This parking area(s) should be accessible by key-card only.

<u>Parking Area Design Configuration:</u> Given the secure and "seven by twenty-four" operational nature of the facility, all parking lots should be well-lighted and void of blind spots, so they can be adequately monitored either by direct visual means or CCTV.

<u>Staff Parking Capacity:</u> Since the facilities operate 24-hours per day, seven days per week, it is expected that all staff will never be at the facility at the same time. Peak staff parking demand will occur between day and swing shifts, when all staff on those shifts may be present.

#### **GENERAL SITE PARKING GUIDELINES**

- Public visitor parking should be immediately adjacent to the public entrance to the public lobby.
- The exterior employee parking area should well lighted and located as closely as
  possible to jail staff service entrance/exit as practical. The employee parking lot should
  also be secured by a fenced perimeter and visual barriers to view from public spaces:
- Video surveillance of all parking areas is encouraged and should be monitored by central control. Video monitoring of any parking areas not directly adjacent to the building is strongly recommended.

#### SITE EVALUATION CRITERIA

#### The ideal site should:

- Be capable of accommodating programmed requirements through a 20-year time frame, and ideally, expansion capability beyond that time-frame.
- Have capacity to accommodate all parking requirements on-grade (unless land cost, exceeds that of structured parking).
- Have convenient access to major transportation arteries.
- Be situated at a high-profile location.
- Be located near major public transportation nodes to provide for convenient public access.
- Be flat or with minimal slope.
- Have compatible zoning and land use for intended function.
- Have convenient public utility access.
- Be able to accommodate separate site access/egress for public versus staff and law enforcement vehicles.

# JAIL SPACE NEEDS - SUMMARY

The following exhibit provides a space summary of all net useable square footage required by each major functional component of the Jail Facility.

#### Flathead County Adult Detention Center Space Allocation Summary

Jail	
Public Entry/Administration	1,460
Public and Official Visiting	450
Staff Services	1,100
Security Operations	1,370
Intake/Release	5,315
Male Housing (198-Beds)	15,910
Female Housing (62 Beds)	5,010
Medical/Mental Health	1,135
Programs/Recreation/Exercise	4,100
Food Services	1,750
Laundry	465
General Support	1,350
Total Building NSF	39,415
Building Grossing Factor (50%)	19,708
	59,123
Total Building GSF	59,123

#### PUBLIC ENTRANCE/VISITATION

All official and inmate visitors to the facility will access the facility by passing through an entry vestibule into the public lobby. The exterior door to this vestibule is locked and controlled by central control when the reception desk is not manned. All visitors will approach the reception officer stationed at the reception/clerical counter in the lobby, which will be staffed on the day shift during visiting and business hours. All visitors will be processed by the reception officer.

Visitors will be processed through metal detection and directed to the administrative office or inmate visiting.

The public lobby will contain a small entry vestibule and a waiting area with seating to accommodate visitors. One male and one female public toilet will be required. Each toilet should be handicap accessible. Wall mounted public telephones and a water fountain should also be in the public lobby.

#### Public and Official Visiting

Video visiting and non-contact visiting booths will be used for family members and friends. This will be accomplished by providing video visiting equipment in each dayroom and providing an area for the public adjacent to the public lobby for public visiting.

Experience indicates that the Visiting Program will generate a demand for visiting booths at a rate of approximately one inmate station per 15 inmates. This ratio applied to the anticipated inmate population of 260 indicates a need for 17 visitation stations. Non-Contact visitation booths will account for 60% of this demand and video visitation stations will make up the balance.

Visits by attorneys and other professionals will continue to be face to face visits. Face to face visiting stations will be located within the secure perimeter, adjacent to the public lobby.

#### **ADMINISTRATION**

The Administrative Offices will be located outside the secure perimeter, directly adjacent to the public lobby. Access to the Administrative Offices will be through the public lobby. Administrative visitors will approach the central control room window and be screened and cleared by the control room officer.

#### Administrative Offices

Office space should be provided for the Facility Commander and Administrative Sergeants. This office space will consist of both hard offices and work stations set up in an open office environment.

#### Staff Break /Conference Area

The staff break/conference area should be equipped with vending machines, a counter with a sink, microwave, space for a full-sized refrigerator, and comfortable seating. It will be accessed by staff 24 hours a day and will also accommodate staff conferences.

#### SECURITY OPERATIONS

The primary function of Security Operations is to oversee security in the facility and monitor and coordinate inmate movement to ensure a safe and secure environment. This component is comprised of the central/housing control room. Security Operation functions will be located inside the secure jail perimeter of the facility. For the most part, all spaces within the Security Operations component will operate on a 24-hour basis, seven days a week.

#### Central/Housing Control

Central control functions as the security nerve center of the facility and includes the central control room, the entry sallyport into the secure side of the facility, and the security support spaces related to communications. This room also functions as the reception area for public visitors and will also provide back-up monitoring of the new housing pods.

The control room functions encompass all life safety and security monitoring systems facility-wide, including all interior and exterior monitoring systems, fire alarm systems, night switchboard, key control panel, radio console, video monitors, and intrusion detection equipment. It is always staffed, is entirely self-sufficient, and has its own toilet. Access to this area is strictly limited to authorized personnel.

The housing control room is laid out to provide the least obstruction of the control room officer's activities while allowing for direct views of all inmate housing areas, minimizing "blind spots" and reducing the need for remote surveillance. The primary function is to monitor and control housing areas, security doors, detection systems, and life safety systems.

The control component is the most secure area within the institution. This area will utilize extensive security construction, hardware, equipment and technology, with appropriate access control and monitoring.

#### INMATE PROCESSING

All inmates processed into and released from the facility will pass through a new intake and release area. Also, inmates being transported to court appearance will be processed in this component.

The inmate processing component is considered a high security area and is in the secure perimeter. This component includes a vehicle sallyport, holding cells, property storage, inmate dress and shower rooms, pre-booking areas and interview rooms.

#### Vehicle Sallyport

A detainee's introduction to the intake process will begin through a secure vehicle sallyport. The vehicular sallyport should be sized to accommodate two (2) light vehicles or one 36-passenger inmate transport bus and up to four (4) parking stalls for light duty vehicles. A secure weapons box will be provided in the sallyport areas where officers who may be transporting inmates to the facility can check their guns before entering the intake area. Access to the facility through the vehicle sallyport is controlled remotely by Central Control.

## Arrival Processing

Once out of the transporting vehicle, the individual will be placed in the intake sallyport under the supervision of the arresting officer. Completion of pre-booking documentation by the arresting officer will take place at a nearby location. In cases involving intoxication, the arresting officer will conduct alcohol tests in an adjacent room.

From the intake sallyport, the individual will be moved to an intake waiting area. The intake officer checks the commitment papers, verifies that the inmate is an appropriate commitment to the facility, and allows passage of inmate and the escort officer into the intake processing area. If the escort officer is not a staff member from this facility, after acceptance of the incoming inmate by the intake deputy, the arresting officer leaves the facility.

Detention personnel at this point will be responsible for conducting a medical and mental health screening. In cases of significant medical or mental health problems, the detainee would be transported by the **arresting officer** to an off-site health care facility. Intoxicated individuals would be placed in an adjacent observation holding area until they can participate in the intake/release process.

# program - jail

Prior to leaving the intake area, the detainee would be fingerprinted by means of optical scanning equipment. Detention staff would then photograph (video) the individual, conduct a further search, and inventory and remove personal belongings.

From the intake waiting area detainees would either be placed in temporary holding areas or immediately moved through the intake booking process. Throughout the process, inmates can be returned to the temporary holding area as required.

#### Holding Areas

There will be two types of holding areas: 1) Group holding cells that can accommodate six or ten inmates, and, 2) Individual holding cells. All holding cells will be equipped with stainless steel combo toilet fixtures. The group holding cell should provide bench seating and the toilet should be shielded from public view with a modesty screen. The cells and holding area should be designed to allow for maximum observation by the intake officer and use impact-resistant glazing on the cell fronts.

#### Intox and Pre-booking Rooms

There will be a room immediately off the sallyport, before entering the main booking area. This room will contain Breathalyzer equipment. Placement should allow easy access by arresting officer.

# Intake Processing

Upon completion of I.D. and search, the detainee would be moved to the booking counter. At this point, detention staff would officially accept and book the individual, prepare records

documentation and initiate pre-trial release and classification evaluations.

The booking counter should be located for maximum observation of all areas and activities which the officer manning it is required to oversee or perform. This includes holding cells, showers, intake and release circulation, identification, etc.

Those individuals to be housed would be moved to the property storage counter, where personal belongings would be exchanged for jail clothing. The property storage counter should also be equipped with a computer terminal, and telephone/intercom. Personal valuables and contraband are inventoried, bagged and stored by the officer at this station. Valuable inmate property, such as jewelry and money will be stored in secure storage.

Upon completion of that transaction, detainees would utilize adjacent showers, change into jail clothing and be moved to an appropriate housing unit based on the classification evaluation.

#### **Property**

The handling of inmate personal property is a critical function assigned to the intake and release section of the facility. It requires an efficient design and sufficient space to facilitate the safe and secure receiving, storage, and ultimately the return of property. Two cubic feet per inmate should be provided. The physical layout of the property and showering areas should be such that it facilitates sequencing of these functions. The property officer inventories the inmate's property and provides the inmate with a receipt.

#### Release from Custody Functions

Upon notification and verification of release eligibility an inmate in custody would be removed from the housing unit and escorted to the intake/release area of the new facility. The individual will access a counter to the property storage room to exchange jail clothing for his or her personal clothing. He or she will then move to a release station at work release where their identity is confirmed, and personal property returned prior to release.

#### Transfer and Court Movement Functions

With minor variations, the out-going process for the transfer of inmates to court and off-site detention/correctional facilities will be identical. Upon notification and verification of a movement/transfer requirement, inmates in custody would be assembled in the housing area and moved either individually or in groups to the intake/release area of the new facility. At this location, subject to segregation requirements, inmates would be temporarily placed in single or group holding cells to await transportation.

Individuals eligible for a video arraignment program are anticipated to access a Video Arraignment Room at this point with appropriate access provided to Attorneys.

Individuals being transported for court appearance would in most cases be taken to court in jail clothing. Upon request, and approval, individuals may require the exchange of jail clothing for their personal clothing. This exchange can occur in a holding cell within the intake/release area.

Those individuals to be transferred to an off-site detention/correctional facility would be dressed for transportation, cuffed and moved to a vehicle in the vehicle sallyport with transfer papers and personal effects.

# program - jail

The return process for individuals transported for court appearance will begin within the vehicle sallyport where they will be moved into the intake/release area. At this point, all inmates will be searched and placed in a temporary holding cell. They will then be moved individually or in groups to the housing units according to their classification.

While the projected volume of inmates coming into the facility at any one time is expected to be small, it is essential that the intake area be designed to maximize efficient processing and ensure security.

#### MEDICAL AND MENTAL HEALTH

The medical and mental health care will continue to be made available to the inmate population of the facility by a combination of on-site and off-site service. Within the facility, medical/mental health screening and evaluation will occur prior to admission. Patient treatment referred by a daily sick-call (triage) process will also be provided as well as scheduled psychiatric counseling, and unscheduled crisis intervention services.

Inmates requiring extended and specialized medical/mental health services will be accommodated by the utilization of available community health care resources. This is

anticipated to encompass overnight in-patient care, surgical and orthopedic treatment, specialty diagnostic and clinical services, X-ray evaluation and dental care.

Medical / mental health services are planned to be provided on a centralized basis at the medical area and will encompass daily sick-call (triage and minor treatment by nursing staff), and pill-call (dispensing of scheduled medications). Periodic observation, mental health counseling and crisis intervention services will also occur within the housing component of the jail.

#### INMATE HOUSING

The focal point in the new jail facility will be that portion dedicated to the housing of inmates. The housing component is where inmates spend most of their time. It is the most important function in the jail from the perspective of the proportion of the total space of the facility it consumes; the attitudes it produces in inmates and staff toward both the institution and one another; and the ability of the facility to effectively operate in a secure and safe manner.

Each inmate will be screened upon admission to the new facility through a classification process to determine to which housing unit he or she will be assigned. The major goals of classification are to separate inmates of differing security categories and to combine inmates with similar jail status. The separate housing of inmates according to security risk, sex, legal status, and other special considerations is necessary to maximize administrative control and order within the facility.

## Housing Management

The housing component of the new facility will function within the context of a decentralized approach to the delivery of jail programs and services. In this regard the housing units will incorporate, beyond cell areas, space to accommodate inmate dining, sick call, video visitation and other dayroom activities. Adjacent to the housing component will be multi-purpose rooms supporting educational and counseling activities and

religious services. Also adjacent to the housing, within line of sight of jail staff, will be secure outdoor recreation areas.

Under this operational concept, inmate access to activities that occur on a regular basis are focused within the housing area of the new facility. Inmate access to special functions such as court appearances, medical and mental health treatment and legal library services will be provided on a centralized basis independent of the housing area.

It is anticipated that most of the housing components of the new facility will be managed in an indirect mode of supervision to maximize staffing efficiencies.

#### Housing Concept

The planned inmate capacity is based upon the accommodation of at least 260 inmates in a modular arrangement of cell blocks and dorms. These units will share access to common program and service functions but will be self-contained regarding dayroom and shower facilities.

Based upon the projected inmate population, the organization and nature of the housing units in the new facility will reflect the following distinct types of custody configurations.

- Minimum Security for Males will be accommodated in 36 bed direct supervision units comprised of dormitory space with contiguous day/dining area and common toilets/shower facilities.
- Medium Security for Males will be accommodated in 24 bed indirect supervision units comprised of a mix of double occupancy cells and quad cells each with a contiguous day/dining area and common shower facilities.
- Maximum Security for Males will be accommodated in a 12-bed housing pod with indirect supervision consisting of double occupancy cells usually holding a single occupant each but designed to increase capacity to 24 beds if needed.
- Special Handling for Males will be located within a new 12 bed single cell unit. These cells accommodate inmates under medical, protective custody or isolation charge who are incompatible with the general inmate population. All cells will be negative air pressure.
- Minimum Security for Females will be accommodated in a 24-bed indirect supervision unit comprised of dormitory space with contiguous day/dining area and common toilets/shower facilities.
- Medium Security for Females will be accommodated in a 24-bed housing pod with indirect supervision comprised of double occupancy cells each with a contiguous day/dining area and common shower facilities.
- Maximum/Special Handling Housing for Females will be located within a new 8 bed single cell unit. These cells accommodate inmates under medical, protective custody or isolation charge who are incompatible with the general inmate population. All cells will be negative air pressure.
- <u>Inmate Workers</u> will be accommodated in separate 6 bed male and

program - jail

female indirect supervision units comprised of a dormitory pod with contiguous day/dining area and common toilets/shower facilities.

# PROGRAMS/EDUCATION/ RECREATION/EXERCISE

Inmate programs, education and recreational components, are planned to be provided on a decentralized basis by locating these services close to the housing unit.

#### Education and Counseling

As the incarcerated population grows over time it should be anticipated that educational and associated counseling activities will increase to include a formal G.E.D. (General Education Diploma) instructional program as well as practical educational programs addressing topics such as anger management and living skills.

Based upon a review of comparable detention facilities, it is estimated that up to 20 percent of the inmate population can be expected to participate in regularly scheduled educational/counseling activities. This ratio, when applied to an approximate jail population of 260 indicates an assumed level of participation of around 52 inmates.

To minimize inmate movement within the new facility it is planned that educational and counseling services will occur close to the housing units with group sessions scheduled within the programs/multipurpose rooms. Individual counseling would occur at visiting stations.

# Religious Services

Formal religious activities (weekend services) within the new facility will generate a level of participation at approximately 25% of the inmate population. This ratio is in accordance with other comparable detention facilities, and when applied to an approximate jail population of 260 indicates a level of participation in religious services of up to 65 inmates.

The conduct of religious services within the new facility are also planned to occur within the programs/multi-purpose room associated with the housing units.

# Library Services

The availability of legal library services within the new facility will be accommodated in a centralized manner within a moderately sized, internet-based law library. At this location provision will be made for eligible inmates to access legal materials, do research, and prepare legal documentation.

# program - jail

Recreational Library Services within the new facility will be provided with limited reading material on shelving in the multi-purpose room. A planning ratio of 2 books per inmate has been assumed as the basis for the recreational library collection.

#### Personal Services

The commissary process will involve decentralized completion and submittal of purchase requests on a non-cash basis; centralized order processing; and decentralized cart delivery of filled orders to inmates in each housing unit.

Jail operations will facilitate the daily exchange of inmate personal and legal correspondence. After central screening and sorting by administrative staff, incoming mail will be moved to the individual housing officers for distribution to inmates. Housing officers will be responsible for screening legal mail in view of inmates, prior to its distribution.

Outgoing mail will be collected from each housing unit, centrally screened and forwarded to the Postal Service by administrative staff.

#### Recreation / Exercise

The inmate exercise component will encompass the provision of exercise, and active and passive activities in both indoor and outdoor settings. Passive activities, such as reading, television viewing, typically occur within dayroom and multi-purpose spaces. Physical conditioning and some exercise can also be conducted indoors in select dayroom and/or multi-purpose areas. In addition, outdoor exercise space should be available to accommodate active group athletics and physical exercise.

It is planned that recreational activities will occur on an unscheduled basis in housing dayrooms and either on a scheduled or unscheduled basis in multi-purpose rooms and secure outdoor recreation yards adjacent to the housing units. These yards will be configured to facilitate direct visual observation by housing officers.

Individual and/or group active and passive recreational opportunities will be provided daily to all eligible inmates. Access to outdoor recreation will meet or exceed 7 hours per week per inmate. This will include outdoor and indoor activities and availability of staff.

Outdoor activities will be available during the day. Indoor activities will be available during the day and evenings, subject to inmate work schedules.

It is anticipated that recreation activities within the New Facility will be structured in the following manner:

Recreational activities occurring in individual cells are limited to reading and exercise.

# program - jail

- Recreational activities occurring in dayrooms may include: reading; television viewing; music listening; card and board games.
- Recreational and general-purpose activities in the multi-purpose rooms may include: meetings; group counseling/educational sessions; and television viewing.
- Recreational activities in secure outdoor yards adjacent to the housing units may include: personal exercise, leisure, single athletics, and group sports.

# Video Arraignment

The video arraignment process will be utilized for first appearances and some initial court hearings. This process will save the county costs by reducing transportation costs of inmates. The video arraignment process shall be located within the secure perimeter and it will occur in the programs/multi-purpose room on a scheduled basis.

#### FOOD SERVICE

The food service component is responsible for the preparation and delivery of three daily meals to each in-custody inmate. Jail personnel are additionally provided one meal per shift.

A new food service component will be planned to maintain a food preparation capacity to provide for three daily meals per inmate. Of these meals, a portion will constitute bag lunches provided to inmates involved in court proceedings and work programs. Jail staff will also be provided a meal while on duty with a food preparation capacity based upon the peak shift staffing level.

Within the new kitchen, meals will be prepared at a central kitchen staffed by a combination of kitchen staff and inmate workers. Food will be "dished up" into compartmentalized thermal trays which are transported to each housing unit on hot carts together with cups, utensils and a beverage. Inmates will receive their meals from the hot carts and eat their meals in the dayroom.

Within the housing unit, inmates will utilize table seating within the dayroom for their dining needs although meals may be served within individual cells where circumstances dictate. At the completion of the meal, the food tray, cup, and utensils will be returned by cart to the washing area of the central kitchen for clean-up and storage.

All arriving goods will be taken from delivery trucks, placed on the loading dock, inventoried, screened and then placed in the dry storage room or go directly into the cooler/freezer in the kitchen.

#### **LAUNDRY**

The function of this jail component is to receive soiled clothing and bedding, and to clean, store, and distribute them to the inmate population. A full-service laundry will be provided within the new facility and be staffed by inmate workers, under the supervision of jail staff.

Jail staff, supported by inmate workers, will be responsible for the collection/distribution and

exchange of inmate clothing and bedding articles. Clean clothing and soiled articles will be moved between the laundry area and housing units by cart. Distribution and collection of clean and soiled articles will occur at the housing unit.

Inmate clothing and bedding will be exchanged twice weekly. The central laundry area will be sized and equipped with commercial grade washer/dryer units based upon an average of 15 pounds of laundry per inmate per week applied to the assumed maximum jail population of approximately 260.

Storage of inmate clothing and bedding articles will be provided at the laundry area.

#### **SUPPORT**

The Building Maintenance and Storage component of the new facility will provide a combination of daily facility upkeep, selective repair, and appropriate preventative maintenance to minimize the operational down-time of equipment and functional areas at the jail.

The new facility will incorporate, (inside the perimeter fence), a general maintenance shop to accommodate minor building repairs. The provision of this capability will support the following assumptions regarding maintenance services.

- Daily facility housekeeping and minor preventative maintenance will be performed by inmate workers under direct supervision of security staff and guidance by Sheriff's Department maintenance personnel.
- Ongoing minor repairs and general facility maintenance will be the responsibility of onsite Sheriff's Department maintenance personnel.
- Major repairs and maintenance requirements and electrical repair work will be accomplished by off-site County Maintenance personnel and contracted vendors.

The storage of jail maintenance and operational supplies will be accommodated both within the new facility and at the free-standing storage building. The allocation of storage capacity will be based upon the following planning assumptions.

- Short term storage will be provided within the Jail to accommodate a minimum 30-day usage of janitorial, shop and operational supplies as well as paper and forms.
- Long term storage of the above supplies will be provided either by contracted vendors or at the storage building.

Exterior area requirements associated with building maintenance and storage reflect the need for a secure service yard; loading space and yard area will be required for up to two trash dumpster units.

#### COUNTY OWNED SITE

This site is commonly referred to as "Kalispell Feed and Grain" site

Site Address: 3452 US Highway 93S

The county received the property on a Tax Deed. There is no Survey of Record for the property and the property description is a metes and bounds description deducted from a larger parcel. Refer to GIS map attached to this report.

Approximate dimensions of the site were scaled off the GIS graphic image.

#### The property is currently zoned:

- Parcel 6BA (West Parcel) = SAG5 (Subdivision Agriculture 5)
- Parcel 5CCA (East Parcel) = I1H (Industrial Highway)

These parcels should be rezoned "Public." Setback requirements for Public zoning is:

- Front & Rear setbacks: 20 Feet.
- Side setbacks: 5 Feet.
- The permitted building lot coverage for Public zoning is 45%.

#### Parking requirements will be the same as the City of Kalispell;

- Jail: One (1) space per five (5) jail cells (260/5=52 parking spaces).
- Sheriff: One (1) space per Three hundred (300) gross square feet of building.

Flood Zone: The West parcel is partially in the 100 year flood zone, which means there is a 1% annual chance of flooding. The county planning office has no grade information on the site, past flood levels. The GIS maps with a visual of the flood zone is the best information currently available. There are no unregulated flood hazards, which means there is not a 500 year flood zone.

The site grades range from about 2920 around the access to the site from the highway to 2900 on the west portion of the site; approximately a 20 foot grade change across the site. Site grading and some fill can mitigate any concerns regarding the flood zone.

There will need to be a significant amount of site cleanup to ready the site for a new law and justice site.

#### 4.0 SITE DESCRIPTION

This site is located at 3450 U.S. Highway 93 South, approximately 3.5 miles south of the city of Kalispell, in Flathead County, Montana. The site consists of two parcels of land; Tract 5CCA and Tract 6BA (**Figure 1**).

- Tract 5CCA (Geocode 07396633301010000), consists of 9.62 acres in the NVV¼ SW¼ and the SW¼ NW¼ of Section 33, Township 28 North Range 21 West. Tract 5CCA is generally triangular in shape and adjoins a former railroad grade along its northeast boundary, U.S. Highway 93 at its southeast corner, and Tract 6BA on the west. Tract 5CCA is zoned I-IH which is heavy industrial. According to Flathead County GIS data, this parcel is not located in the floodplain.
- Tract 6BA (Geocode 07396632101100000), consists of 5.63 acres in the NE¼ SE½ Section 32, Township 28 North, Range 21 West. Tract 6BA is irregular in shape due to its boundary with Ashley Creek on the west. Tract 6BA is zoned SAG-5 which is Suburban Agricultural with a 5-acre minimum. According to Flathead County GIS data, this parcel is almost entirely located in the 100-year floodplain.

Site location documentation is contained in Appendix B.

At the time of our reconnaissance, Tracts 5CCA and 6BA were improved with a variety of industrial and commercial buildings, most of which were occupied. Site improvements and current occupants include the following. **Figure 2** presents a site plan.

#### Tract 5CCA

- Building 1 (B-1) is a two-story building concrete block building with a pitched metal roof and attached warehouse occupied by Bob's Pickup and Delivery freight service. The storefront and upper-level apartment are currently vacant.
- Building 2 (B-2) is a sheet metal warehouse with concrete slab floor and flat metal roof occupied by H&H Express freight service. Attached to B-2 is a feed mill of sheet metal and crib construction.
- Building 3 (B-3) is a sheet metal shop constructed around a wood-frame building that is occupied by Above and Beyond Paint.
- Building 4 (B-4) is a sheet metal shop with concrete slab floor and flat roof occupied by Hector Perez who salvages auto parts for resale.
- Building 6 (B-6) is a sheet metal shop with concrete slab floor and flat roof shop occupied by Orvis Irrigation.
- Building 7 (B-7) is a sheet metal shop with concrete slab floor and flat roof shop occupied by Stable Lift manufacturing and welding.
- Building 8 (B-8) is a concrete block shop with concrete slab floor and flat metal roof occupied by Jim Palmer Signs. A grain elevator of sheet metal crib construction and concrete bases from five grain storage bins adjoin B-8 on the east.

• A fertilizer plant, consisting of a wood reactor building and nine large-capacity aboveground storage tanks, is situated in the north portion of Tract 5CCA.

#### Tract 6BA

 Building 5 (B-5) is a sheet metal shop and two-story office with concrete slab floor and flat metal roof occupied by Powder Coating of Kalispell. Other improvements include a kiln building and two small sheet metal sandblasting sheds.

The east portion of the site is approximately 20 feet higher in grade than the remainder of the site and may be constructed on fill. A slope break exists north and west of B-8, otherwise the site is generally level and gently sloping towards Ashley Creek. Areas of the site not occupied by the buildings consist of unpaved driveways and parking areas, and areas vegetated with grass and weeds. The northwest boundary of the site along Ashley Creek is vegetated with thick brush and shrubs. The Flathead River is located approximately one mile east of the site.

Utilities on and near the site include a domestic well which provides water to all businesses at the site, and six septic systems. Overhead electric borders the site on the east and south and also crosses the north and western portions of the site. A total of 14 pole-mounted transformers were observed on or adjacent to the site. Underground utilities also include natural gas, telephone, and fiberoptics.

Properties adjoining the site consist of vacant pasture land beyond Ashley Creek to the north and west and commercial businesses along U.S. Highway 93 to the east and south. For the purposes of this PA, the term "adjoining property," as defined by the ASTM standard means properties that border or are contiguous or partially contiguous with the site or would be so but for a street, road or other public thoroughfare separating them.

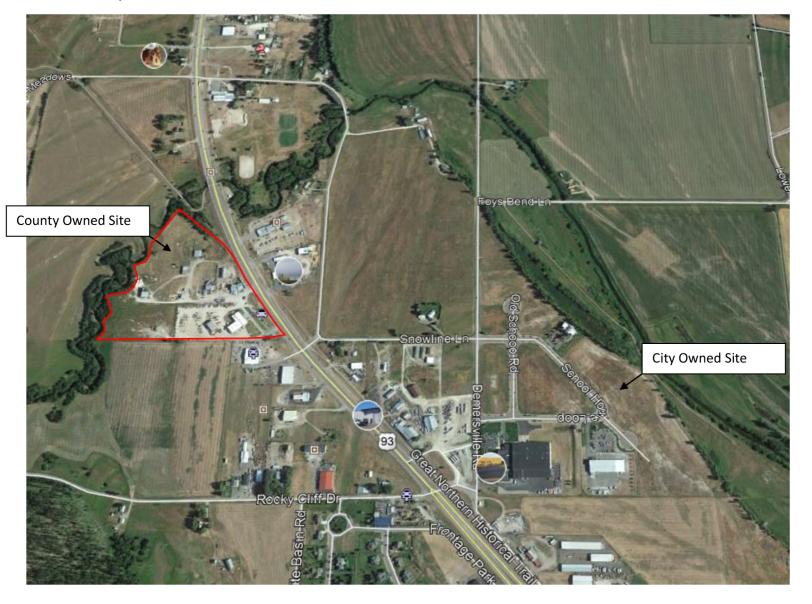

#### Legal Description of Site

A tract of land situated in the southeast quarter of the northeast quarter and the northeast quarter of the southeast quarter of Section 32, and the northwest quarter of the southwest quarter and the southwest quarter of the northwest quarter of Section 33, Township 28 north, Range 21 west, P.M.M., Flathead County, Montana, particularly described as follows:

Beginning at the southwest corner of the NW 1/4, SW 1/4, of Section 33, Township 28 north, Range 21 west, P.M.M., Flathead County, Montana; thence south 89 degrees 58 minutes west and along the southerly boundary line of the NE 1/4, SE 1/4 of Section 32,a distance of 570.00 feet, more or less, to the center line of Ashley Creek; thence following along said center line of Ashley Creek to a point on the northerly boundary line of the NE 1/4, SE 1/4 of Section 32; thence continuing along said center line of Ashley Creed to its intersection with the westerly right-of-way of the Great Northern Railroad; thence south 41 degrees 55 minutes east and along said westerly right-of-way a distance of 148.22 feet to a point where the Great Northern right-of-way changes from 50 feet to 75 feet; thence south 48 degrees 5 minutes west, continuing along said right-of-way a distance of 25 feet to a point; thence south 41 degrees 55 minutes east, continuing along said right-ofway 500.00 feet to a point; thence north 48 degrees 5 minutes east following along same right-of-way a distance of 25.00 feet to a point; thence south 41 degrees 55 minutes east, continuing along same right-of-way a distance of 210.00 feet to a point of intersection with the westerly right-of-way of U.S. Highway No. 93; thence continuing along said Highway right-of-way and being a one degree curve on an arc distance of 893.33 feet to a point on the southerly boundary line of the NW 1/4, SW 1/4 of Section 33; thence south 89 degrees 30 minutes west and along said southerly boundary line of NW 1/4 SW 1/4 of Section 33 a distance of 1111.50 feet to the place of beginning, and containing 26.0 acres of land, more or less.

EXCEPTING therefrom a tract of land situated in the northeast quarter of the southeast (NE 1/4, SE 1/4) quarter of Section 32 and the northwest quarter of the southwest quarter (NW 1/4, SW 1/4) of Section 33 of Township 28 North, Range 21 West, P.M.M., Flathead County, Montana.

#### EXISTING FACILITIES ANALYSIS / REPURPOSING

As a part of planning for a new detention facility we were also tasked with repurposing the spaces in the existing justice building that are being freed up with the development of a new detention facility on a new site.

We found that both District Courts and Justice Courts needs both additional courtrooms and space for support services. District Court currently has two court rooms and will need up to five court rooms in the next 15 years. Justice Court currently has two small courtrooms and will need four court rooms in time. Our approach is to leave the existing courtrooms in tact as much as practical while expanding the when possible. Justice Court especially needs larger courtrooms.

In the District Court system we have planned a jury room for each court room along with a Judges office/sweet for each courtroom equivalent in size to the existing. These spaces will all be located on the third floor along with all of the District Courtrooms. The goal is to keep as much of the district court system on third floor as practical.

As we evaluated the Justice building it became apparent that both District and Justice Court systems were in need of space reorganization, to achieve more efficient staff relationships and traffic flow. Since this building was built, staff and space have been added to each department wherever it could be found. This approach resolved immediate space requirements, however it has created inefficiencies. With Jail and Sheriff Departments relocating to a new site a thorough space planning study needs to be conducted for the entire building to better utilize all of the space available.

Our initial assessment is that District Court should be given any available space on third floor vacated by the jail. This being said the third floor space will require significant remodeling to develop this space into office functions. The jail exercise yard has no roof, which would have to be added. The areas of the Jail where the cell blocks are located do not extend all the way to the third floor roof – walls will have to be extended and a new roof structure built over this area.

District court should also be given a significant portion of the vacated jail space on second floor where Justice Court is located. Justice Court can expand to occupy the remainder of second floor and portions of first floor.

# justice center-building space usage

The current layout for both court systems have well defined public and staff circulation corridors. We feel this separation is important for the efficient operation of the court systems and needs to be maintained. We are also providing additional staff vertical circulation (stairs) between second and third floors for staff to move more efficiently between floors.

Based on our initial analysis of this building it became apparent that over time the Court system will require the entire building, which should provide sufficient accommodations for the court system for the next 20 years.

The counties Information Technology (I.T.) department is currently located in the basement and is planned to be moved to first floor. As the court system grows Justice Court system will eventually need this space.

The basement will primarily be used for storage and records for the court systems.

The existing Vehicle Sally Port and some holding cells will remain on first floor to accommodate transport of prisoners between the jail and the court system. The existing secure elevator and stair will also be maintained up to the third floor for the vertical transport of prisoners.

Although the long range plan is to relocate the Sheriff's offices to the new site with the Jail we have allocated space for the Sheriff's offices in the Justice building until such time as the courts will require the space. This allows the County some flexibility to plan for future projects.

We have included both a spreadsheet and floor plan diagrams detailing the reallocation of space in the Justice Building.
